

# NORTH SEA CORE CIC

The North Sea Core initiative has been operating since 2018 to collect offshore core released by energy companies through the relinquishment, abandonment and decommissioning of fields on the UK Continental Shelf. We aim to make geological samples accessible to amateur and professional geoscientists alike, redistributing core material for use by the wider scientific community.

Where possible we integrate with openly available subsurface data, thanks to the Oil and Gas Authority National Data Repository and are supported by DownUnder GeoSolutions with a licence for their DUG Insight software. We are also grateful to ONE-Dyas for their current sponsorship.

## Available core material includes:

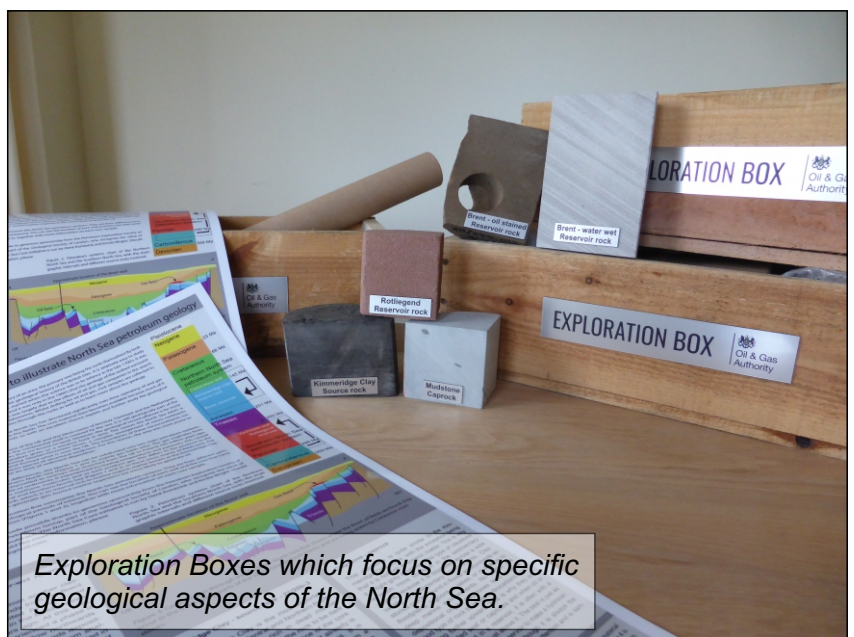

- Core Samples
- Research Material
- Exploration Boxes
- Teaching Sets
- Framed Core
- Gifts and Prizes
- Core Displays
- Workshops and Webinars

*Integration of the core material with open access subsurface data where possible.*

*Core gifts and prizes for speakers, conferences and events.*

*Exploration Boxes which focus on specific geological aspects of the North Sea.*
